This book is a Michigan State University electrical and computer engineering graduate students in materials. easy-to-digest of the content of the mathematical knowledge of the book is divided into four parts. Basic analysis section describes the basic concepts and analysis of non-linear systems; feedback systems analysis section describes the input - output stability. frequency domain analysis of passive and feedback system; modern analytical part of the modern stability analysis basic concepts. the stability of the perturbed system. perturbation theory and averaging and singular perturbation theory; nonlinear feedback control part of feedback linearization and give several nonlinear design tools. such as sliding mode control. Lyapunov Ivanov design. backstepping design method. based on the passive control and high-gain observer. Addition book appendix also brings together some mathematical knowledge used in the book. including the review of the basic mathematical knowledge. compression mapping and some of the more complex theorem proving.
