Reviews

*This publication is really gripping and exciting. It really is basic but unexpected situations in the 50 % in the book. It is extremely difficult to leave it before concluding, once you begin to read the book.

Observations Remarks.--a, Clear 1; d, Clear 2; e, Clear 3;/, Thin haze; g, Clouds; A, Thick; i, Better; A, Definition poor; m, Moon; q, Out of center; r, Driving clock running poorly; s, Twilight; w, Observer in uncomfortable position; y, Star near horizon; 1, Vision or judgment apparently not as good as usual. Treatment of the Observations.--The observations with star A, plotted separately, showed somewhat more dispersion than the B observations. Furthermore, the smooth curve laid through the B observations looked as if it could be represented theoretically. This was not the case with the smooth curve through the A observations. The residuals of the individual B observations from the B curve gave a probable error of 0M.026 for a single observation. The frequency curve of the residuals is closely in accord with the error curve, and very similar to the frequency curve of the residuals of the observations of Y Camelopardalis. The residuals of the A observations, on the other hand, gave a probable error of 0M.042 and a frequency curve with more than one maximum.--u--- KMKUI FIG. 2. Distribution of residuals of observations of S Z Herculis. The V-B residuals are apparently accidental, while the distribution of the A-V residuals indicates that comparison star A is a variable. Whenever observations had been secured with both comparison stars in one evening, it was possible to average such observations over short...
