Each pole of these oil switches is inclosed in a separate fireproof structure made of brick or concrete. The use of soapstone is not essential and it must be borne in mind that it readily absorbs oil. The doors to the tank compartments are either asbestos fiber, slate slabs, or wire glass, and are held in place by clamps, or hung from the top of the compartment. Switches or circuit breakers of this construction have been installed up to 50,000 volts normal capacity (see Fig. 2). American switches for 60,000, 80,000, 100,000 volts, and even higher are designed on the same principle as those for 30,000 volts. They are either top or bottom connected.
